

USING A PASSWORD MANAGER

ADVANTAGES

- Passwords are kept in one safe place; an encrypted vault.
- You only need to remember one really *strong* password.
- Your passwords are synchronised across all your devices.
- The Password Manager will remember your usernames and passcodes etc.
- The Password Manager will generate *really* robust passwords – unique for each site.
- You can also store other sensitive information such as credit card details, Passport number etc.
- They do what they say they will.

DISADVANTAGES

- Forgetting the master password could be disastrous.....
- Forgetting to sign out could allow someone access to all your accounts.
- It might not support all your devices and browsers.
- Most only work with Web-based browser logons. Not desktop applications.

WHAT ABOUT BROWSER-BASED PASSWORD MANAGERS?

- Web browsers – Chrome, Firefox, Internet Explorer and others all have integrated Password Managers. But none of them can compete with a dedicated programme written specifically for the job.

PRINCIPLES OF OPERATION

- After installation, the application works with your Browser.
- Create a Master really strong password to access your 'Vault'.
- Visit your regular websites that require login and password. Do so.
- The PWM prompts you to save the site in the Vault. Say Yes.
- Update the PW with one from the PWM. Update your Vault.
- Explore Settings and adjust to suit.
- Log out of the PWM when you have finished.

LETS SEE IT IN ACTION.....

NEXT MONTH: WE ARE AIMING FOR....

- A state where every computer can 'see' every other computer on the network.
