

REINSTALLING WINDOWS 10

WHY SHOULD WE REINSTALL WINDOWS?

- Performance Issues
- Malware & advertising popups
- Corrupted Registry
- Unnecessary Start up Programmes
- Heavy Security Suites
- PC Cleaning Tools
- Browser Toolbars and Extensions
- Junk Software
- Updates to the latest version – Better than doing a factory reset

There are a number of ways to install or re-install Windows to a computer.

- Installing Windows directly from the internet.
 - Installing Windows from within Windows, called “Fresh Start”.
 - Using installation media; a USB drive or DVD.
- 
-

Windows 10 November 2019 Update

The Update Assistant can help you update to the latest version of Windows 10. To get started, click **Update now**.

Update now

[Privacy](#)

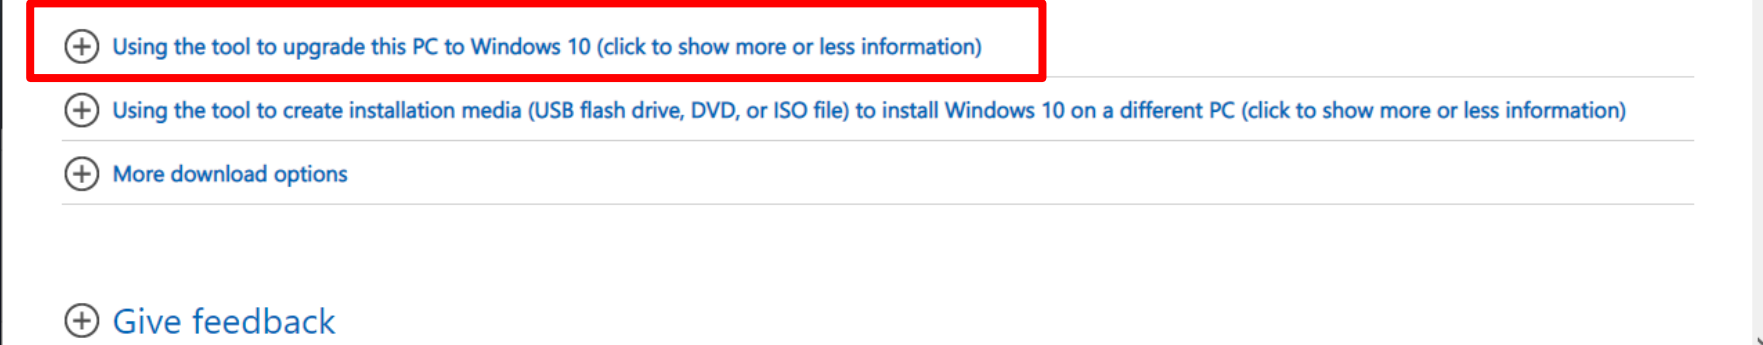

The Update Assistant can help you update to the latest version of Windows 10. To get started, click **Update now**.

[Privacy](#)

To get started, you will first need to have a licence to install Windows 10. You can then download and run the media creation tool. For more information on how to use the tool, see the instructions below.

[Download tool now](#)

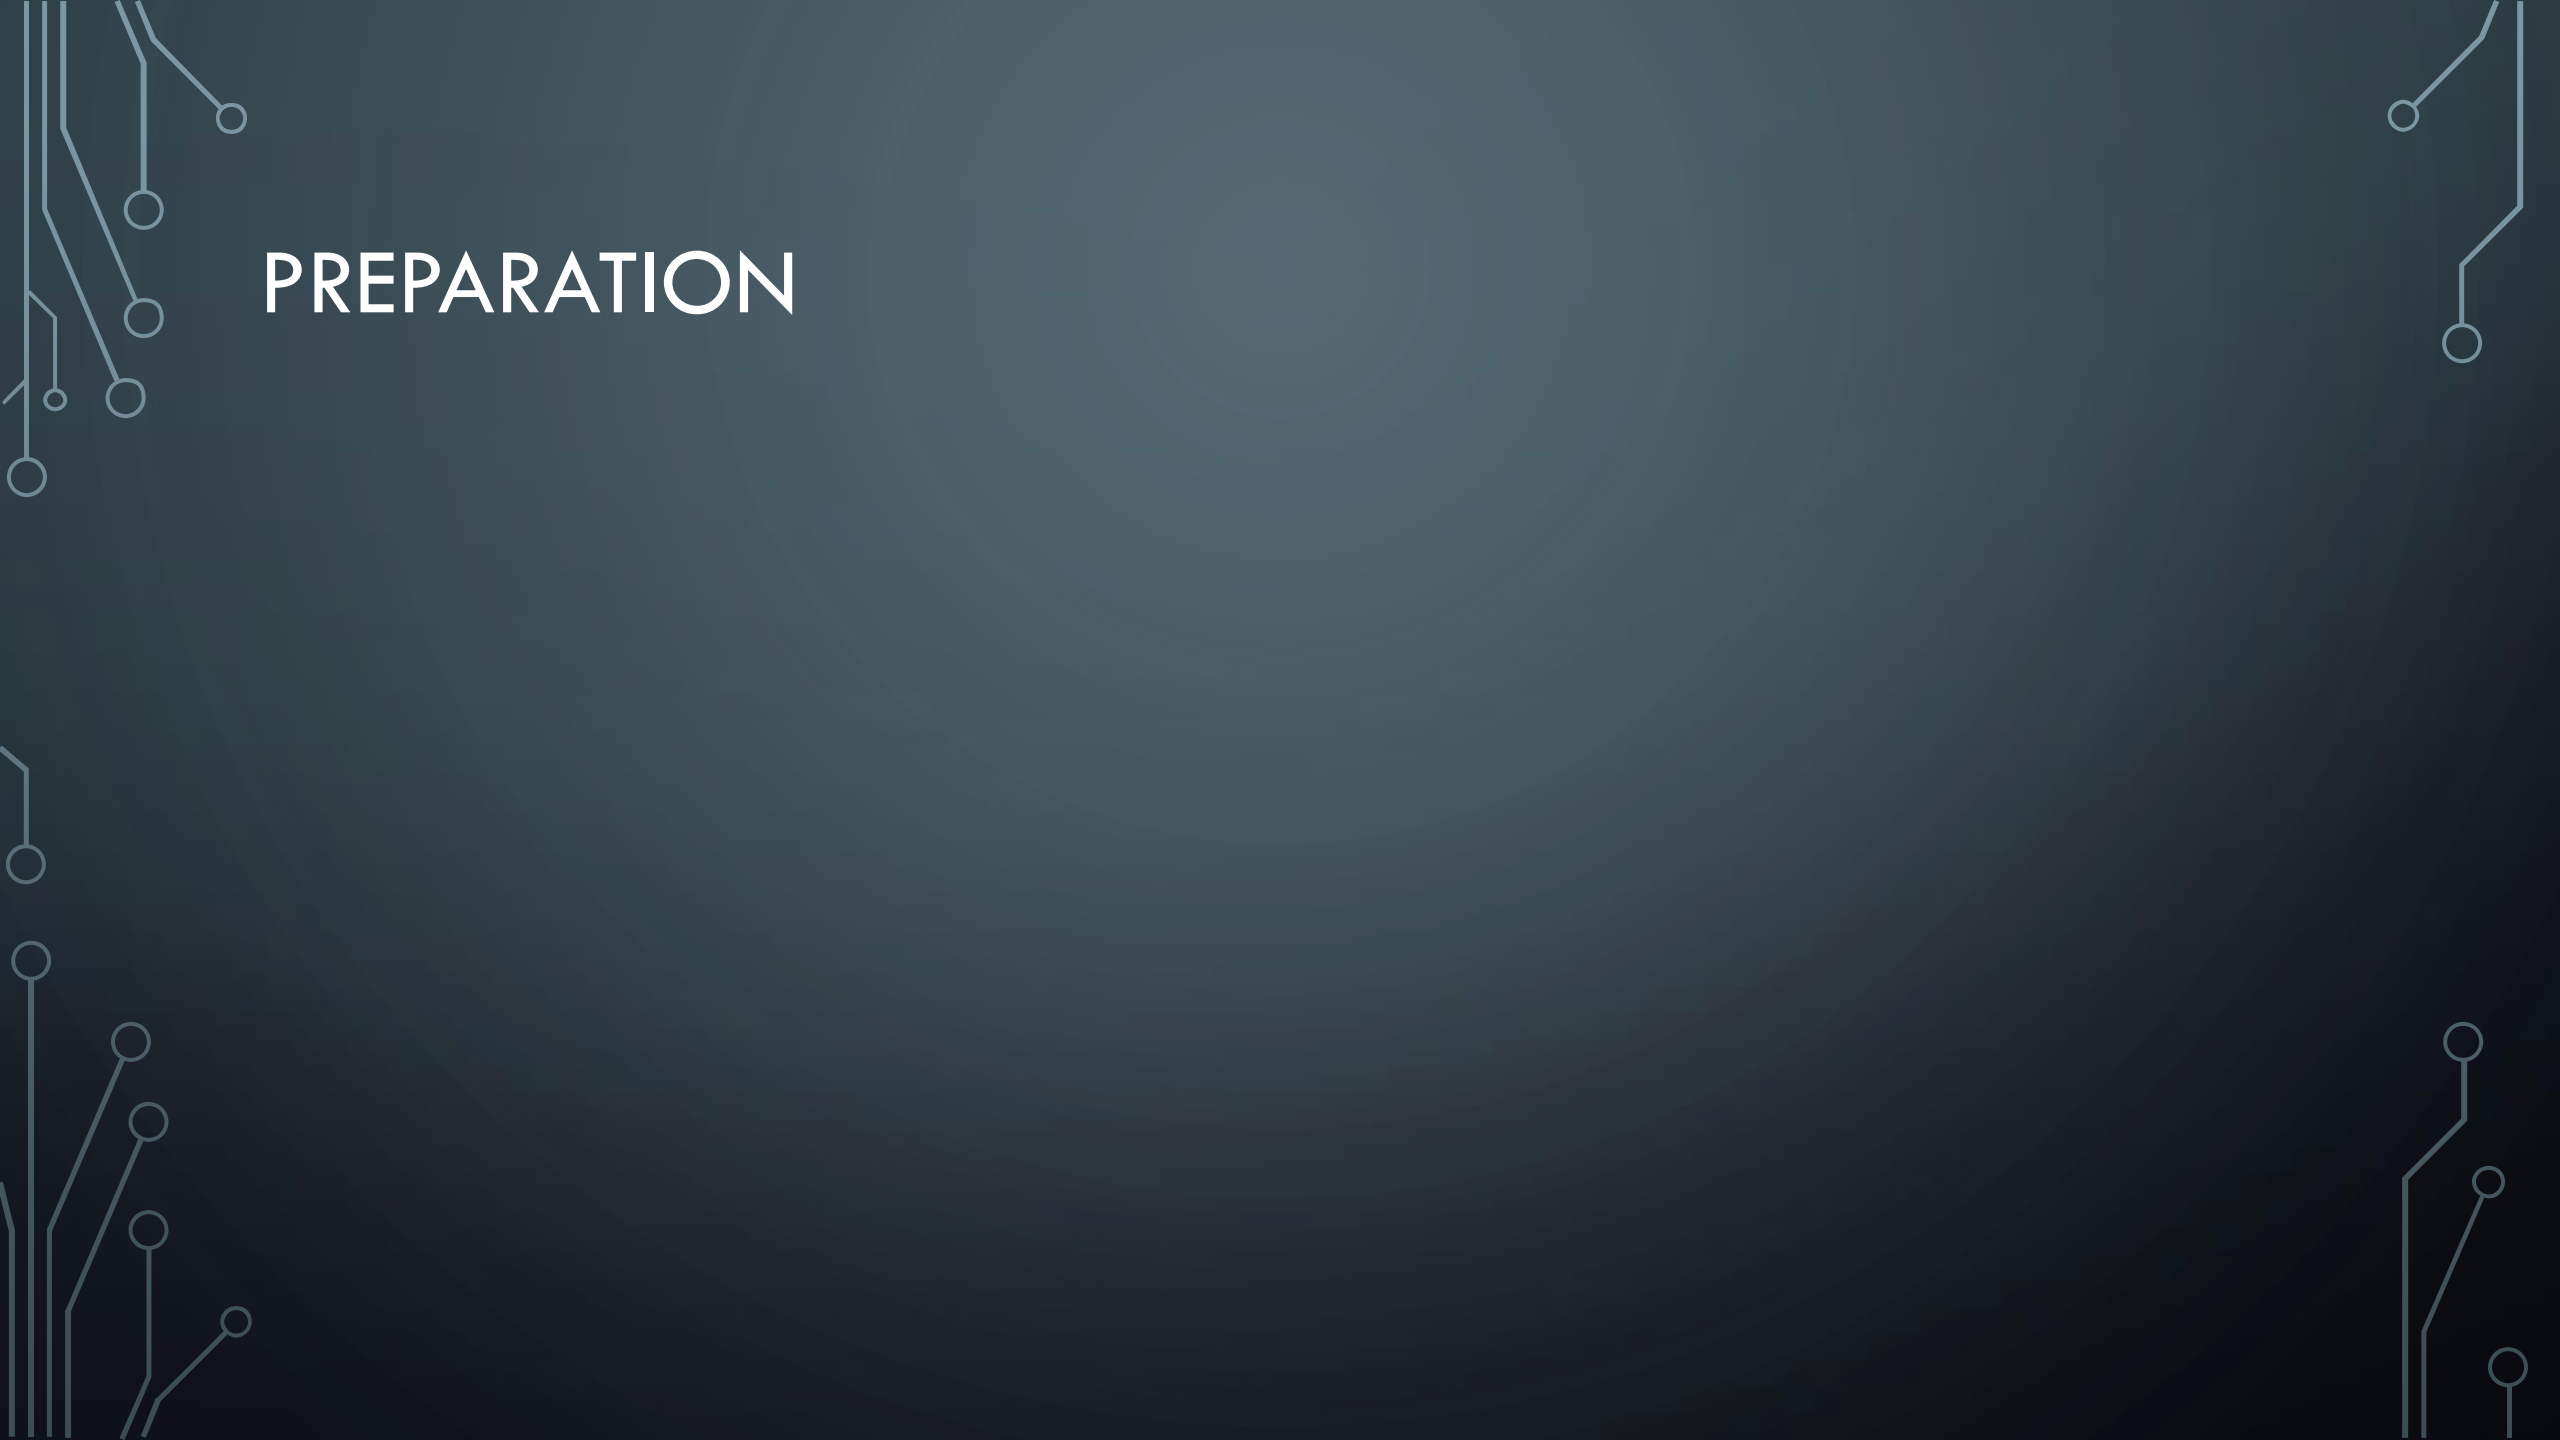

[Privacy](#)

[Download tool now](#)[Privacy](#)

 Give feedback

USING WINDOWS “FRESH START”

- Fresh start will reinstall and update Windows 10.
- Fresh Start REMOVES 3rd party software and apps that doesn't come standard with Windows. It only keeps Microsoft Store Apps that the manufacturer installed.
- You will have to reinstall a lot of your software, although Microsoft have handily provided a list of apps that were removed during the process. There will be an icon on your desktop for this list.
- There is a lot of preparation to do beforehand.

The background is a dark blue gradient with faint, large concentric circles. In the corners, there are white line-art illustrations of circuit boards or neural networks, featuring lines and small circles.

PREPARATION

List of all your software you have installed so you know what you need to re-install.

Ensure you have installation media or can download it from the internet.

Check for any license numbers required. (Use a [product key finder](#) if required)

Drivers for Printer/s

List any settings that you might have to reapply ie:

- Mail accounts

- Mail settings rules and folders

- Windows Settings. Start | Settings

- Screensaver settings

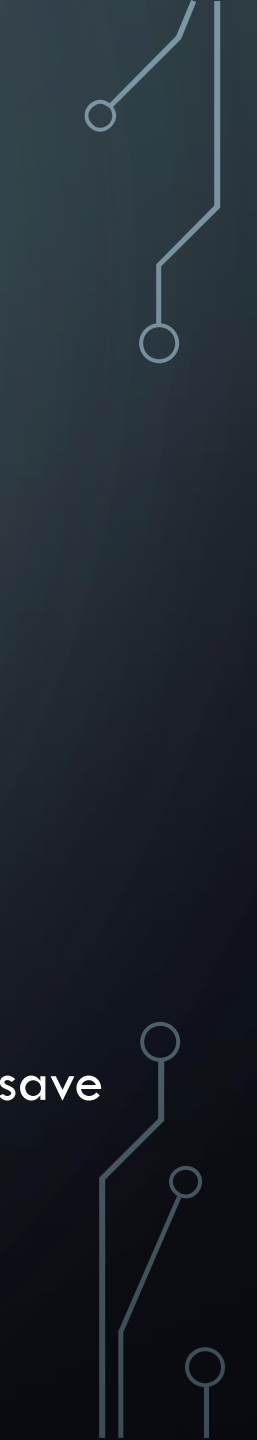

- Desktop Picture/s

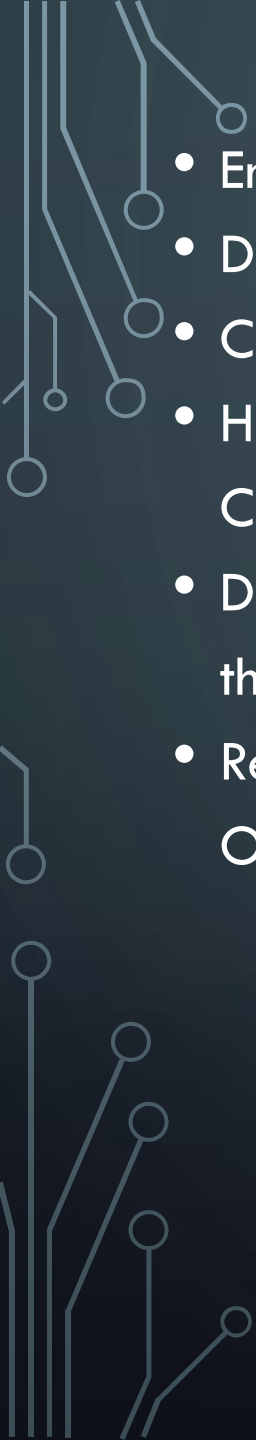

- Lock settings

- Power and Sleep settings

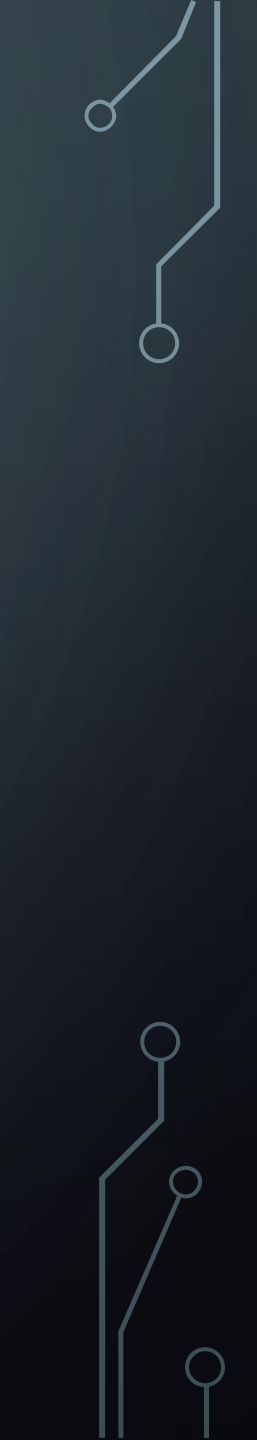

- Wi-Fi network & password

Are you bothered about app' preferences? Margins, Page setup, default fonts, default save locations etc. What about your Word custom dictionary?

- 
- Ensure your Documents are safe – in the Cloud, backed up, copied etc
 - Ditto for Photos, videos and music.
 - Check for data in unusual locations ie other than “My Docs, My Photos” etc
 - How about your Custom Dictionary from Word?

C:\Users\%username%\AppData\Roaming\Microsoft\Uproof\Custom.Dic

- Do you have any software running in the background? Backups for example. What are these settings?
 - Remove your device from any software apps where you are 1 of nnn installations ie Office 365 and Norton subscriptions.
- 

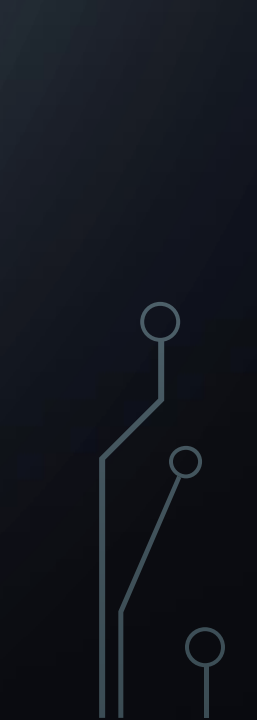

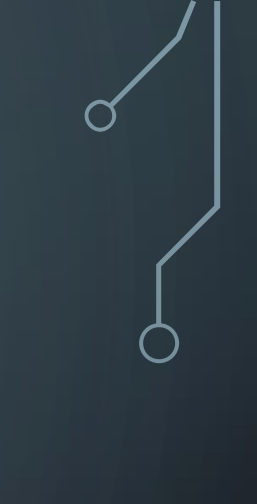

List of all your software you have installed so you know what you need to re-install.

Fresh start

Start afresh with a clean and up-to-date installation of Windows. This will keep your personal files and some Windows settings and remove some of your apps.

In some cases, this may improve your device's startup and shutdown experience, memory usage, Store apps performance, browsing experience and battery life.

Feedback

There are a number of ways to install or re-install Windows to a computer.

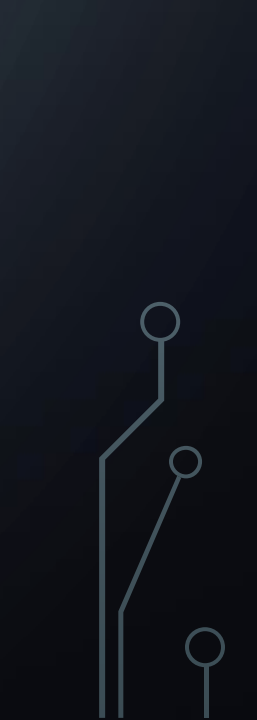

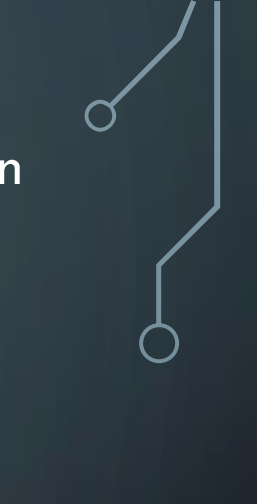

- Installing Windows directly from the internet to the computer you are working on.
 - Installing Windows from within Windows of the computer you are working on. They call this “Fresh Start”.
 - Using installation media; a USB drive or DVD. You can create these yourself by downloading Windows 10 from the Microsoft Website. This has the advantage that you could use your media in more than one PC (providing you have a licence of course).
- 
- 
- 

Using a USB Drive or DVD you need to make the computer use that drive first rather than the C Drive

Do this by entering the BIOS as the computer boots up

Different computer manufacturers have different key combinations

ASRock: **F2** or **DEL**

ASUS: **F2** for all PCs

Acer: **F2** or **DEL**

Dell: **F2** or **F12**

ECS: **DEL**

Gigabyte / Aorus: **F2** or **DEL**

HP: **F10**

Lenovo (Consumer Laptops): **F2** or Fn + **F2**

Lenovo (Desktops): **F1**

Lenovo (ThinkPads): Enter then **F1**.

Microsoft Surface Tablets: Press and hold volume up button.

Origin PC: **F2**

Samsung: **F2**

Toshiba: **F2**

Zotac: **DEL**

BIOS INTERRUPT KEYS

Using a USB Drive or DVD you need to make the computer use that drive first rather than the C Drive

Do this by entering the BIOS as the computer boots up

Different computer manufacturers have different key combinations

The BIOS has now been replaced by the UEFI specification (Unified Extensible Firmware Interface)

The BIOS has limitations:

- Only supports hard drives of 2.1TB or less

- Must run in 16 bit mode

- Has only 1MB of memory to run in.

- Does not support a mouse.

- UEFI is a great improvement

Enter the BIOS and change the boot order (if required) so that the USB or DVD drive boots before the C drive.

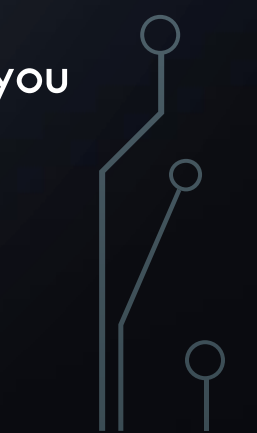

With your USB stick or DVD in place. Restart the computer.

The computer will start up with the Windows 10 download that you downloaded.

Follow the prompts.....

When the computer restarts for the first time, take the USB or DVD drive out, otherwise you will be at point 1 again!

The background is a dark blue gradient with a large, faint, light blue circle in the center. In the four corners, there are decorative white line art elements resembling circuit boards or neural networks, with lines and small circles.

Good luck
